I want to show my chart on the new window , but below code is not work . I need to send data to the new window . how can i do , thanks.

vue is a SAP APP, so i create a new page to do this , whether has another better way?

ipc.on('showChart', function (e, data) {
const modalPath = process.env.NODE_ENV === 'development'
? `http://localhost:9080/showChart.html`
: `file://${__dirname}/showChart.html`
let win = new BrowserWindow({ width: 400, height: 320, webPreferences: {webSecurity: false} })
win.on('close', function () { win = null })
win.loadURL(modalPath)
})

☺

Your webpack should have multiple entries.
multiple entries
set plugins

First of all, you need to disable `mode: 'history'` in your vue-router, check in vue-router docs

Then do the following:

src/main/index.js example

```
ipc.on('showChart', function (e, data) {
  const modalPath = process.env.NODE_ENV === 'development'
    ? 'http://localhost:9080/#/showChart'
    : `file://${__dirname}/index.html#showChart`
  let win = new BrowserWindow({ width: 400, height: 320, webPreferences: {webSecurity: fa
  win.on('close', function () { win = null })
  win.loadURL(modalPath)
})
```

In your router, use the exactly path to your url
src/renderer/router.js example

```
{
  path: '/showChart',
  name: 'showChart',
  component: require('your-router'),
},
```

If your need another approach, take a look at this repo:

- - The creating of another window
- - Calling it from a menu or via ipc

Open new window with different renderer entry(main.js) #779

ⓘ Open

3zbumban commented on 30 Jul 2019

```
new BrowserWindow({
    width: 400,
    height: 320,
    webPreferences: { webSecurity: false, nodeIntegration: true },
    show: false,
});
```

In my case it worked after adding `nodeIntegration: true` to the `BrowserWindow` options.

> It turns out, `nodeIntegration` was true by default in previous electron versions, but false by default in 5.0.0.

First of all, you need to disable `mode: 'history'` in your vue-router, check in vue-router docs

Then do the following:

src/main/index.js example

```
ipc.on('showChart', function (e, data) {
  const modalPath = process.env.NODE_ENV === 'development'
    ? 'http://localhost:9080/#/showChart'
    : `file://${__dirname}/index.html#showChart`
  let win = new BrowserWindow({ width: 400, height: 320, webPreferences: {webSecurity
  win.on('close', function () { win = null })
  win.loadURL(modalPath)
})
```

In your router, use the exactly path to your url
src/renderer/router.js example

```
{
    path: '/showChart',
    name: 'showChart',
    component: require('your-router'),
},
```

If your need another approach, take a look at this repo:

- - The creating of another window

- - [Calling it from a menu or via ipc](#)

versions:
```
chrome: "73.0.3683.121" electron: "5.0.8" node: "12.0.0" v8: "7.3.492.27-electron.0"
```

@3zbumban My code like this

```
ipc.on('showChart', function (e, data) {
  const modalPath = process.env.NODE_ENV === 'development'
    ? 'http://localhost:9080/#/showChart'
    : `file://${__dirname}/index.html#showChart`
  let win = new BrowserWindow({ width: 400, height: 320, webPreferences: {webSecurity:
false} })
  win.on('close', function () { win = null })
  win.loadURL(modalPath)
})
```

After build it, new window is blank when open it in the main window

🙂

@hanjt
make sure that:

- ☐ it works with your main BrowserWindow
- ☐ do you have set the vue-router to `mode: 'history'` (`src/renderer/router/index.js`)
- ☐ you are serving on the right port (in your case `9080`)
- ☐ you are passing in a `process.env.NODE_ENV` (try to log it to the console). you might be using the `vue-cli-service` to serve or build your app which [desides based on the command wich NODE_ENV to use](#).
- ☐ do you have content created that can be displayed? and added to your routes?

you also might want to check out [vue-cli-plugin-electron-builder](#) in my opinion the simplest way to use vue inside electron.

🙂
